## Introduction to HTML

HTML (HyperText Markup Language) is the foundational language of the web, essential for creating and structuring web pages. As a beginner-friendly markup language, HTML allows you to build the structure and content of a webpage by using simple tags and elements. Each tag serves a specific purpose, from headings and paragraphs to images and links, forming a cohesive layout. By learning the basics of HTML, beginners can quickly grasp how to add text, media, and interactive elements, transforming their ideas into fully functional web pages. With HTML as the backbone, one can embark on an exciting journey into web development, bringing their creativity to life on the internet.

## Heading Tags

From <h1> to <h6> are Heading Elements in HTML h1 is the largest and h6 is the smallest, (note: Never use Headings to make the text bold or something).

Here's a proper way to use this element:-

HTML

Output

**This is An heading**

**This is An heading**

**This is An heading**

**This is An heading**

**This is An heading**

**This is An heading**
